

Selected Resources for Modelling Queensland's Railways and Shire/Cane Mill Tramlines

Queensland's railways include mainline, branch line, industrial and municipal operations with a range of ownership and operating styles. The presentation will explore the readily available research resources -- text and visual, conventional and electronic, rail and non-rail -- that enable the modeller to create more accurate models and model settings.

The presenter is primarily an On30 Queensland sugar cane and shire railway modeller and regularly exhibits his 'Capricorn Sugar Railway Museum' models/dioramas/modular layout. He's a Narrow Gauge Down Under author on cane railway and modelling topics, and has been using photorealistic card modelling techniques for both structures and rolling stock.

Authentic scenery elements and colouring, signs, structures and lineside items, vehicles, wagons, carriages and locomotives are essential to creating a believable Queensland scene. However, many aspects of creating a model railway—trackwork, scenery and electrical, etc.—are the same for any model railway. Your local hobby shop, newsagent, bookseller, library or the Internet will have such materials.

This idiosyncratic listing has been selected from my personal library as a guide to the type and range of resources available to the modeller creating accurate Queensland models and scenes. It is not a definitive listing and the clinic will suggest a broader range of resources.
