Fold tabs back 180° and glue to back of wall as bracing to keep wall straight

O Scale (1:48) Toilet Block 6' x 12' with sloping roof as in Rockhampton CBD

Uses *Clever Models* brick texture and details, and *Paper Creek* timber texture. International standard toilet signage downloaded from web.

Walls can be finished with scale timber at eave to support roof (optional). Roof should be glued to timber underroof before assembly.

Doors should be cut out of wall and extra doors glued under before cutting from page. Door panels can also be cut out to increase 3D effect. Door knob/fittings, likewise.

The toilet block is small enough that it may not need interior bracing, use your discretion, especially if the card used is lightweight.

Optional details might include an open door (and interior toilet, sink, etc.?), lighting, and a lattice modesty screen between the doors.

"Scratchbuilt" kit using commercial detail parts and textures. Print on 210gsm card for best result. This free download from CaneSIG: www.zelmeroz.com/CaneSIG/ © May 2010
