The CD a subset of the on-line web site and is designed for off-line use. The on-line caption search system and similar functions are not available on the CD. And just as on-line, there may be occasional broken links. Links off the CD should have been disabled, with the url pasted into the text. Be aware that these links were valid when initially cited but were not verified when preparing the CD. The on-line CaneSIG site may have further details and updates.

CaneSIG is a free resource for modellers of the world's sugar cane railways and is a 'virtual' SIG with over 100 informally associated member contributors worldwide. The resources focus on Queensland or Fiji for reasons of access and convenience to contributors, but content is sought from all sugar producing areas with associated railways.

Please contact the Coordinator if you have resources that you would like to share or comments on the web site. Please be very explicit with urls and other details, and include the word "CaneSIG" in your e-mail subject heading, where sending queries.

**Greg Stephenson's 009 Models**

Greg Stephenson and Bob Dow collectively had the most influence on my modelling Queensland sugar cane railways. I'd been a modeller of North American shortbranch lines, particularly logging lines, in HO/N scale so cane railway concepts came easily.

However, Bob's early convention clinics and Greg's modelling examples really boosted me along.

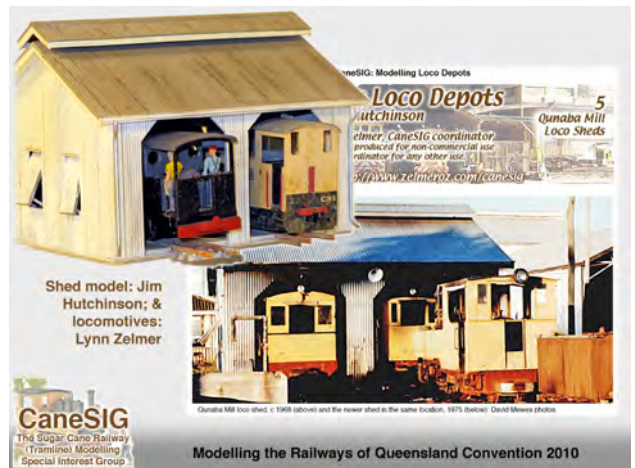

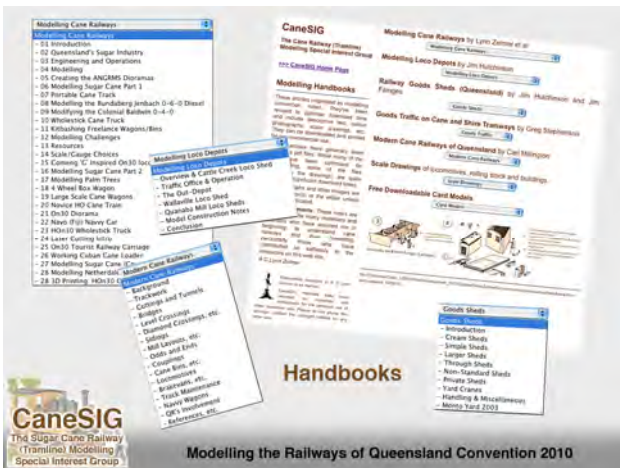

They are both freelance modellers in 009 scale, in 3.5 or 4mm to the foot operating on trim gauge track. Bob produced a line of cane equipment (bins, cranes and crane engines in the 1960s that may still be available as cheap metals and tin plans for the Jambach diesel turned the basis of my Handbook article on building a 009 Jambach loco.

Greg's weed sprayers and other models provided inspiration, particularly his use of commercial wagon chassis kits for freelance heavy wagons. His slide collection and other technical information provides a significant portion of the CaneSIG image collection and papers as all.

Lynn Zelmer
